SUMMARY

Software Engineer with **4+ years of experience** building **production-grade web applications** using **React, TypeScript, Node.js, and Django**. Experienced in **REST API design, containerized deployments on AWS**, and **frontend and backend performance optimization**. Has shipped **LLM-integrated features** for internal workflows with validation and reliability controls. Strong collaborator with hands-on experience supporting **production systems, testing, and CI-driven releases**.

SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript
Backend Development: Java Backend Development, Spring Boot, Spring MVC, Node.js, Express.js, Django, RESTful API Development, Authentication and Authorization (JWT), Middleware Design, Server-Side Application Architecture
Frontend (Supporting): React.js, TypeScript, HTML5, CSS3, Component-Based UI Development, State Management (Hooks)
Databases: PostgreSQL, MySQL, MongoDB, JPA, Hibernate, Database Schema Design, Query Optimization, Indexing
Build & Testing: Maven, JUnit, Mockito
Cloud & Infrastructure: AWS (EC2, ECS, S3, Elastic Beanstalk), Docker, CI/CD Pipelines, Linux, Git
APIs & Integration: REST APIs, JSON-Based Client–Server Communication, Error Handling, Input Validation
Tools: GitHub, Bitbucket, Jira

EDUCATION

Masters in Computer Science North Carolina State University, Raleigh NC, USA	May 2025
Bachelor of Technology in Artificial Intelligence Anurag University, Hyderabad, India	July 2023

EXPERIENCE

ServiceNow, IL Software Engineer	Oct 2024 - Current
- Contributed to the development and maintenance of multiple internal web applications using React and TypeScript, building reusable functional components with Hooks and Context for shared state management across feature modules. - Implemented and extended backend services using Node.js and Express, designing REST endpoints, request validation middleware, and JWT-based authentication for internal-facing APIs. - Improved frontend performance by reducing unnecessary re-renders, optimizing component dependency usage, and applying memoization where appropriate, resulting in measurable improvements to page load and runtime responsiveness. - Containerized backend services using Docker and deployed them via AWS ECS, working with existing EC2-based infrastructure to ensure consistent behavior across development, staging, and production environments. - Integrated LLM-based automation features using OpenAI APIs to support internal workflows such as text summarization and classification, reducing manual handling of repetitive tasks. - Implemented prompt versioning, input sanitization, response validation, and fallback logic to improve reliability and control of AI-assisted features in production environments. - Collaborated with product managers, QA engineers, and platform teams through code reviews, sprint planning, and incident triage to deliver features aligned with internal requirements and platform standards. - Wrote unit and integration tests for frontend and backend components and supported CI pipelines to ensure stable releases and predictable deployments.	
Virtual Infotech Solution, India Software Engineer	Sep 2020 – July 2023
- Designed and developed full-stack web applications for client projects using React, Node.js, and Django, delivering features based on functional specifications and client-defined workflows. - Built and maintained RESTful APIs with PostgreSQL and MongoDB, implementing CRUD operations, data validation, and role-based access controls for client-facing applications. - Developed responsive user interfaces using HTML5, CSS3, Tailwind CSS, and modern JavaScript, ensuring consistent behavior across desktop and mobile browsers. - Integrated third-party services and Firebase for authentication, notifications, and real-time data synchronization, reducing the need for custom backend implementations. - Improved backend performance by analyzing slow queries, adding appropriate indexes, and optimizing ORM usage, resulting in faster API response times under production load. - Deployed and supported applications on AWS (EC2, S3, Elastic Beanstalk) and GCP, handling environment configuration, basic monitoring, and access control for hosted systems. - Participated in code reviews, debugging, and production issue resolution, collaborating with senior engineers to improve code quality and system stability over successive releases.
